

Twiflex USA Rebuild Center

Twiflex USA can refurbish your old, worn calipers for considerably less cost than the replacement of a new Twiflex caliper assembly

- **Cost Effective**

Cost effective alternative to caliper replacement

- **Fast**

Often faster than acquisition of new brake assemblies

- **Comprehensive**

Includes all common wearable and integral items

- **Like-New**

Refurbished to original condition and warrantied as such

Twiflex USA keeps most replacement and spare items in-stock. This results in shorter turnaround time than typically associated with new units. Shorter turnarounds can make shutdown planning easier.

Twiflex USA inspects all consumable wear items to determine if replacement is necessary. Integral metal parts, such as cylinders and pistons, are inspected for scratches or signs of wear that can cause leakage or premature failure of other common wear items.

After inspection, units are refurbished to original condition. The same cycle and hold testing that is performed on new units is conducted on all refurbished units to guarantee that they are returned in like-new condition.

Unless otherwise informed during teardown and inspection, Twiflex USA will replace all known wear items and warranty these under our standard terms and conditions.

In addition to Twiflex USA repair capabilities in-house, we also offer on-site inspection and repair by trained service technicians.
