

Huco Bellows Couplings

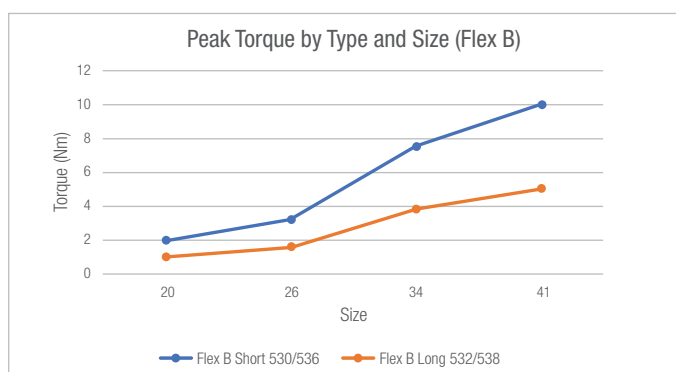

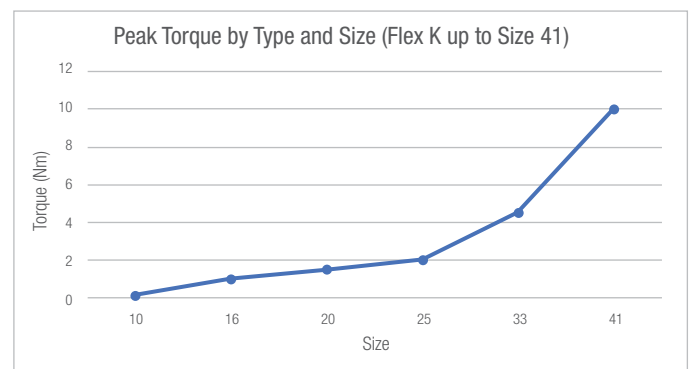

FEATURES & BENEFITS

- Precision all metal construction couplings with excellent kinematic properties. Both coupling types offer differing combinations of stiffness, radial compensation, and axial motion.
- Superior bonding process – stronger joint – more reliable under fatigue loading
- Torsionally rigid design – ideal for precise applications
- Zero backlash – for accuracy & repeatability
- No moving parts – eliminates possibility of components separating
- Low inertia – Excellent for highly dynamic positioning & velocity control
- Huco technical & engineering support for standard and custom designs

AT A GLANCE

Type	Materials	Applications	Speeds (RPM)	Standard Bores (mm)	Temperature Range °C
Flex B	Stainless Steel	High end servo drives, pulse generators, scanners, positioning slides, metering valves etc.	Up to 5,000	3-65	-40 to +120
Flex K	Stainless Steel		Up to 15,000	3-65	

Huco can also respond quickly with a wide variety of general purpose, beam style, and precision couplings found in a diverse range of key market sectors.
