

CBC-100 Series Clutch/Brake Controls

Installation & Operation Manual

P-266-WE
819-0472

Introduction

The Warner Electric CBC-100 series clutch/brake controls are compact units designed for operation of all Warner Electric 90 VDC clutches and brakes. They should not, however, be used to directly power Warner Electric permanent magnet failsafe brakes as these products require an adjustable current or voltage supply for optimum release.

The CBC-100 controls can be conveniently mounted into any Warner Electric's standard conduit box or into any control panel. These controls are single channel devices available in two models:

CBC-100-1 120 VAC input
 CBC-100-2 220/240 VAC input

Internal circuitry provides suppression of transients during decay of the magnetic field to assure fast current decay for rapid cycle rates. Customer supplied switching is accomplished on the AC input to the control. The CBC-100 series controls are UL Listed and CSA Certified.

Cycle Rate

In most applications, the maximum cycle rate is limited by the clutch and/or brake capability rather than by the control. To determine specific capabilities, consult the Application Engineering section of Warner Electric Catalogs, P-8586-WE, P-8587-WE, P-8588-WE, P-8589-WE, P-8590-WE or P-1264-WE. The following table lists those clutch/brake models which maximum cycle rate may be limited by this control.

Installation

⚠ WARNING To avoid injury (or even death), always make certain all power is off before attempting to install this control or any electrical equipment.

1. Conduit Box Mount

- a. Mount the conduit box to the magnet assembly per the instructions found in the manual shipped with the clutch or brake.
- b. Connect wires to the power source, switching, and magnet coil per the Connection diagram and the following instructions:
 1. Connect the red wire to one of the magnet terminals.
 2. Connect the red/white stripe wire to the other magnet terminal.
 3. Connect the hot side of the power source to the black/red wire through the fuse and switch as shown.
 4. Connect the neutral side (other hot side for the CBC-100-2) to the white wire.
- c. Attach the cover with the CBC-100 to the conduit box.

2. Panel Mount

- a. Mount the CBC-100 in a convenient location in the control panel using the Dimensions diagram. NOTE: A barrier strip or terminal strip is recommended for wiring between the CBC-100 and the external connections to the brake or clutch, switch, fuse, and power source.
- b. Connect the power source, switching, and magnet coil per the Connection diagram and the following instructions:
 1. Connect the red wire to one of the magnet terminals.
 2. Connect red/white strip wire to the other magnet terminal.
 3. Connect the hot side of the power source to the black/red wire through the fuse and switch as shown.
 4. Connect the neutral side (other hot side for the CBC-100-2) to the white wire.

⚠ CAUTION This is a floating-type power supply and is not referenced to AC ground. Under no circumstances should any of the output wire leads be connected to earth or chassis ground as the unit will be destroyed.
