Altra Industrial Motion committed to Asia-Pacific

Altra Industrial Motion, a global leader in power transmission products for the mining industry provides the Asia Pacific mining industry with extensive product support, sales and service. With a network of strategically located sales offices and distributors, Altra brands are preferred suppliers of power transmission and motion control components to the world's leading mining companies and are able to provide world-class customer service and support throughout the entire region.

Altra's strong presence in the region is supported by sales and service offices in Beijing, Shanghai, Hong Kong, Taiwan, Australia, Singapore and Thailand, and by a large Asia Pacific distributor network. As a result, the firm's sales within the region rose in 2008 by more than 20%, according to the company.

"It's hard to visit a mining operation anywhere in the region, or in the world for that matter, and not run across at least one Altra product in use," said Altra Marketing Director, David Brooksbank. "In the past five years, we've placed an extremely strong focus on the Asia Pacific mining industry.

Altra is one of the world's foremost global suppliers of quality power transmission and motion control products with leading brands in the mining industry including Wichita Clutch, Marland Clutch, Twiflex Limited, Industrial Clutch, Stieber Clutch and TB Wood's. Altra and its 19 brands operate 28 production facilities throughout the world.

Altra supports the mining industry with a wide array of products including industrial clutches and brakes, couplings, backstops, belted drives, enclosed gear drives and open gearing. These critical power transmission products can be found in every mining application ranging from shovels and draglines to crushers, ball and SAG mills, inclined conveyors, hoists and more.

Several of Altra's major brands have enjoyed success in the mining industry for over 50 years, thanks to rugged design and an intimate knowledge of mining applications. For decades, Industrial Clutch and Twiflex brakes have been standard on the world's leading draglines. Marland and Stieber backstops are used on uphill conveyors and on port equipment for loading and unloading minerals. Wichita Clutch products can be found on ball mills, sag mills, and mining conveyors around the world.

One of the most recent and impressive installations in the region, according to Sales Manager, Colin Barker, is a massive Marland Clutch backstop with 975,000 Nm holding torque that was installed in January, 2009 on a conveyor at the Boddington gold mine in western Australia.
