

SE55 Torque Limiting Module

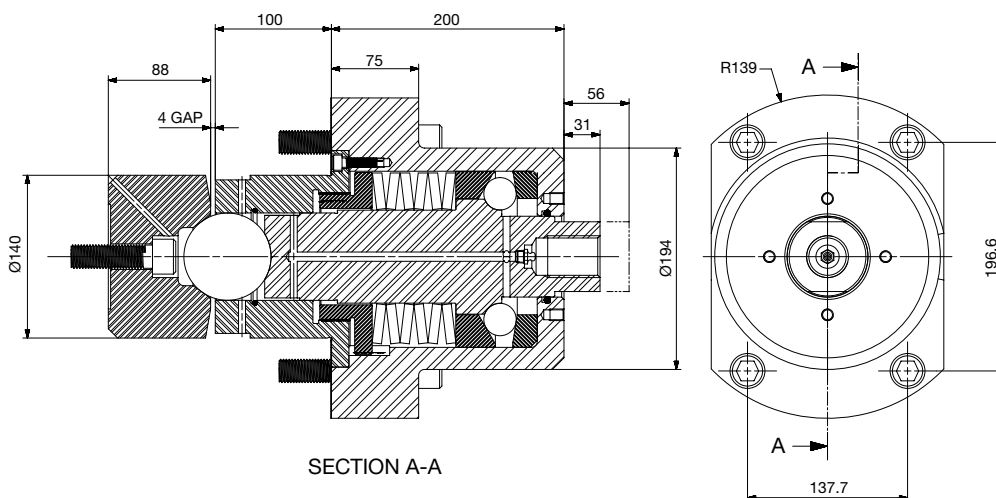

FOR ULTIMATE OVERLOAD PROTECTION

BIBBY SE55 TORQUE LIMITING MODULE

The SE55 module represents the largest-capacity torque-limiting module available from Bibby, an industry pioneer. Like the well-established units in the current range, the SE55 uses the familiar ball-detent design, but offers significantly increased load capacity.

Fewer modules are now required to achieve high break-out torques, minimising space requirements, simplifying installation, and reducing future maintenance burden.

The proven, disconnectable design means the break-out torque of a limiter assembly may easily be set to suit different load conditions.

FEATURES

- Maximum tangential force rating 480 kN
- Complete disengagement upon overload
- Consistent reaction times to zero transmitted torque in the order of 5 ms
- Simple, manual reset
- Manual disconnect option
- Tamper-proof torque setting
- Highly repeatable break-out torque to $\pm 5\%$
- Radial or axial installation
