

Custom Component

AUTOMOTIVE TRANSMISSION

PROBLEM

A global automotive producer of engine and drivetrain systems needed help developing a unique, high-volume assembly for a new, “cutting-edge” transmission.

SOLUTION

Although the new assembly was not a bearing, our customer quickly saw that Kilian possessed the core expertise to take on this extremely challenging project. Combining Kilian’s strength in engineering development, precision machining, molding, assembly, quality systems, testing and project management, Kilian was able to achieve the demanding quality and program targets to successfully launch the new system.

Kilian knows bearings, but we can also provide the same kind of support for other “non-bearing” projects that take advantage of our wide array of engineering and manufacturing capabilities.

HIGHLIGHTS

- Unique, custom engineered solution
- High-volume assembly
