

Wind Turbines Live Longer, More Productive Lives

WITH HELP FROM SVENDBORG BRAKES

Maximizing productivity and extending the service life of wind turbine generators is critical for wind farm operators worldwide. Svendborg Brakes delivers proven solutions designed to improve reliability, reduce downtime, and protect long-term investment.

We design, test, and deliver complete wind turbine drivetrain solutions, including rotor and yaw braking systems, rotor locks, cooling systems, and hydraulic power units. With decades of industry experience – including supplying braking solutions for the world’s first offshore wind farm in Denmark – we continue to lead innovation in the global wind market.

Our products are engineered for durability and performance. Through extensive R&D and testing, we deliver high-quality components built to withstand demanding operating conditions and provide long service life for modern medium and large wind turbines.

Close collaboration with turbine OEMs ensures optimal system selection and performance. We also offer customized braking solutions tailored to specific turbine requirements.

Beyond installation, we support customers throughout the full lifecycle of their equipment. Our global service network provides technical support, maintenance, upgrades, and access to genuine replacement parts, including calipers, brake pads, seals, and sensors, to maximize performance and extend component life.

We also offer flexible service and retrofit solutions, upgrading only worn or damaged components while maintaining those in good condition to support cost efficiency and sustainability.

HIGHLIGHTS

- Improve turbine uptime and reduce maintenance costs
- Extend service life with high-performance braking systems
- Customized solutions tailored to turbine requirements
- Global support, service, and genuine replacement parts
- Retrofit and upgrade solutions to maximize sustainability
